Operating the charger

1. Hold your Blink InCard to the reader above the screen.

2. Guests can scan the QR Code or visit www.BlinkCode.com to obtain a Guest code.

3. Select your charge preference and push the Charge button on the screen (the Start button below the screen will also start a session).

If the charge preference is not selected, then pushing the Charge or Start button will initiate the session with a default preference of 90%.

Once you plug in your CHAdeMO connector, charging should begin automatically.

The session can be ended at any time by pushing the Stop button on the screen or the Stop button below the screen.

Unplug the connector after charging has ended and a summary of the session will be displayed on the screen.
